SUMMARY

Software development supervisor with 7 years building systems for retail, ERP, logistics, and e-commerce in Cambodia. Currently leads web development for the POS platform of a 20+ store supermarket chain — a system that runs 24 hours a day — owning architecture, delivery, and the supervision of its developers, while coordinating with business and store teams. Stacks from legacy .NET Framework to Vue 3 and .NET Core.

EXPERIENCE

Assistant Supervisor, Web Development – Chipmong Group

Jul 2025 – Present | Phnom Penh, Cambodia

- Lead web development for the POS platform of a supermarket chain that grew from 10 to 20+ stores on my watch (~US\$5M revenue): plan delivery with business stakeholders, manage developers through code review and mentoring, and own the platform end-to-end — architecture, releases, and 24/7 production support (nginx/IIS) — accountable when the floor depends on it.
- Directed the architecture that scaled the business: stores grouped behind dedicated API instances, per-store databases, a shared central database (vouchers, customers), and a distribution gateway routing each request to the right store.
- Led offline-first checkout design: local SQLite per store pre-synced with master data; sales continue when a connection drops; a background scheduler pushes and reconciles on reconnect — all stores now run hybrid.
- Led the integration layer: SAP via SFTP data files mapped to its structure; other ERP and business systems over SFTP files or APIs with immediate, scheduled, or cron-driven sync.
- Delivered the commercial features — mix-and-match promotions and POSM — plus a second online-only POS for an in-house ERP, and stabilized an inherited codebase as the support team's escalation point.
- Stack: .NET Core, Vue 3/Nuxt, TypeScript, SQL Server, PostgreSQL, SQLite, Redis, Linux (nginx) + IIS.

Full-Stack Developer – Biztools Enterprise Solutions

Feb 2022 – Jun 2025 | Phnom Penh, Cambodia

- Kept an ERP and POS suite running for a roster of clients, each with custom requirements — adding a container-shipment tracking system, a customer loyalty program, and Flutter/Android mobile apps (stock counts, loyalty) on the same platform.
- Worked every layer, database to UI, across two stack generations: .NET Framework 4.x and .NET Core, with React, Svelte, or Next.js frontends.

Full-Stack Developer & Team Lead – One Click Solution

Nov 2019 – Jan 2022 | Phnom Penh, Cambodia

- Built a logistics system and an e-commerce system from zero (ordering, fulfilment, delivery), and wrote internal libraries other projects reused.
- Led a small team: planned iterations, delegated work, and mentored junior developers.

KEY STRENGTHS

- Taught developers at Chipmong and juniors at One Click Solution through hands-on code review.
- Sat between store and business teams and the developers, turning operational needs into features people actually use.
- Picked up a new frontend stack at nearly every job: React and Svelte at Biztools, Vue 3 and Nuxt at Chipmong.

SKILLS

Core: C#, .NET Framework 4.x, .NET Core, Entity Framework, REST APIs, SignalR, SQL Server, PostgreSQL, SQLite, Redis, Git

Frontend: Vue 3 + Nuxt, React, Next.js, Svelte, JavaScript, TypeScript, HTML/CSS

Practices: Agile and Scrum, delivery planning and prioritization, problem-solving, code review, clean architecture, JWT auth, TDD, system design & architecture, database design, deployment & CI/CD, SAP integration, AI-assisted development.

Languages: Khmer (native), English (fluent).

EDUCATION

- Google Project Management Certificate — Coursera, in progress (covers the full project-management lifecycle)
- Google Agile Project Management Certificate — Coursera, 2026 (Agile & Scrum)
- Bachelor of Computer Science, National Polytechnic Institute of Cambodia (2019 – 2022)
