PROFESSIONAL SUMMARY

Software development supervisor and full-stack engineer with 7+ years building enterprise systems for retail, ERP, logistics, and e-commerce in Cambodia. Currently the lead engineer and supervisor of the POS platform behind a supermarket group operating 20+ stores — a system that runs 24 hours a day and is on track to deliver the company's most profitable year. Owns the platform end-to-end: architecture and delivery, the supervision and mentoring of its developers, and day-to-day coordination with business stakeholders, store operations, and the support team. Hands-on engineering depth in C#/.NET and modern JavaScript, with delivery planning, quality standards, and stakeholder management as daily practice.

PROFESSIONAL EXPERIENCE

Assistant Supervisor, Web Development — Chipmong Group

Jul 2025 – Present | Phnom Penh, Cambodia

- Lead web development for the group's POS platform as its supervisor: plan and prioritize the delivery roadmap with business stakeholders, manage the developers through hands-on code review and mentoring, set the quality standards, and coordinate daily with store operations and the support team — accountable for a platform that runs 24/7 across 20+ stores and underpins ~US\$5M in annual revenue.
- Run the full delivery cycle like an owner: design, build, release, and support — owning release rollouts across stores (hosted on nginx or IIS), incident response that includes outside hours, and the escalation path the support team follows when live-store problems surface.
- Develop the people around the platform: raised developer quality through hands-on code review and mentoring, and trained the support team to resolve recurring human-error cases at the source.
- Directed the architecture that let the business scale: store groups served by dedicated API instances, per-store databases, a shared central database for cross-store data (vouchers, customers), and a distribution gateway routing every request to the right store — the design the chain grew from 10 to 20+ stores on.
- Led the design of offline-first checkout: every store runs a local SQLite store pre-synced with the master data it needs; sales never stop when a connection drops; a background scheduler pushes transactions and reconciles on reconnect — all stores now run hybrid.
- Led the integration with the outside world: SAP receives data files over SFTP mapped to its structure; other ERP and business systems connect over SFTP files or APIs, synced immediately, on scheduled windows, or by cron jobs.
- Delivered the features the business sells with — mix-and-match promotions and POSM — plus a second online-only POS for an in-house ERP, and stabilized an inherited codebase on taking over.
- Tech: C# (.NET Core), TypeScript/JavaScript, Vue 3 + Nuxt, SQL Server, PostgreSQL, SQLite, Redis, Linux (nginx) and Windows (IIS) hosting; SAP + ERP integration.

Full-Stack Developer — Biztools Enterprise Solutions

Feb 2022 – Jun 2025 | Phnom Penh, Cambodia

- Built, maintained, and enhanced ERP and POS systems tailored to each client's requirements across industries.
- Delivered additional business systems on the same platform: a container-shipment tracking system and a customer loyalty program.
- Built mobile apps in Flutter and native Android on top of the same systems, used for stock counts and the customer loyalty program.
- Worked end-to-end — database, API, and UI — taking features from requirement analysis through to deployment.
- Moved comfortably between legacy (.NET Framework 4.x) and modern (.NET Core) codebases and across multiple front-end stacks, adapting to whatever each project needed.
- Tech: C# (.NET Framework 4.x, .NET Core), JavaScript, TypeScript, React, Svelte, Next.js, Flutter, native Android; SQL Server, encrypted file data storage.

Full-Stack Developer & Team Lead — One Click Solution

Nov 2019 – Jan 2022 | Phnom Penh, Cambodia

- Built a logistics system and an e-commerce system from the ground up, covering ordering, fulfilment, and delivery workflows.
- Created and maintained reusable internal libraries adopted across multiple projects, cutting duplication and speeding up later builds.
- Led a small team as full-stack developer and team lead: planned iterations, delegated work, and mentored junior developers.
- *Tech:* C# (.NET Framework 4.x), JavaScript, SQL Server, SignalR (real-time updates).

KEY STRENGTHS

- Take end-to-end ownership: plan, design, build, release, and support the platform myself — the person accountable when live store operations depend on it.
- Taught the developers I supervised at One Click Solution and Chipmong through hands-on code review rather than lectures.
- Sat between store and business teams and the developers at Chipmong, turning operational needs into workable features.
- Picked up a new frontend stack at nearly every job as the market moved: React and Svelte at Biztools, Vue 3 and Nuxt at Chipmong.
- Plan and prioritize under real pressure: a POS that runs 24 hours a day across 20+ stores means constant triage between urgent operational fixes and scheduled feature work, so time management is built into the job.

EDUCATION & CERTIFICATIONS

Google Project Management Certificate — Coursera, in progress (covers the full project-management lifecycle)

Google Agile Project Management Certificate — Coursera, 2026 (Agile & Scrum; credential R4QXA9LRJTSS)

Bachelor of Computer Science — National Polytechnic Institute of Cambodia (2019 – 2022)

High School Diploma — Bak Touk High School (2014 – 2018)

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript

Backend: .NET Framework 4.x, .NET Core / .NET, REST API design, SignalR (real-time), Entity Framework Core

Frontend: Vue 3 + Nuxt, React, Next.js, Svelte, HTML/CSS

Data & tools: SQL Server, PostgreSQL, SQLite, Redis + in-memory caching, Git

Practices: Agile / Scrum, code review, clean / modular architecture, JWT authentication, test-driven development (TDD), AI-assisted development workflows

Architecture & delivery: system design and architecture, database structure design, deployment and release pipelines (CI/CD), SAP ERP integration

Leadership: team supervision, mentoring, requirements analysis with business stakeholders, delivery planning, task management, prioritization, and problem-solving

LANGUAGES

Khmer — native **English** — excellent (professional working proficiency)
