PROFESSIONAL SUMMARY

Software development supervisor with 7 years building systems for retail, ERP, logistics and ecommerce in Cambodia. Currently leads web development for the POS platform of a supermarket chain of 20+ stores, a system that runs 24 hours a day, owning architecture, delivery and the supervision of its developers, while coordinating with business and store teams. Stacks from legacy .NET Framework to Vue 3 and .NET Core.

PROFESSIONAL EXPERIENCE

Assistant Supervisor, Web Development | Chipmong Group

Jul 2025 – Present | Phnom Penh, Cambodia

- Lead web development for the group's POS platform as its supervisor: plan and prioritize the delivery roadmap with business stakeholders, manage the developers through code review and mentoring, set the quality standards, and coordinate daily with store operations and the support team. Accountable for a platform that runs 24/7 across 20+ stores and processed about US\$5M in sales in its strongest year, the chain's best sales year while I have led the platform.
- Run the full delivery cycle like an owner: design, build, release and support, including release rollouts across stores hosted on nginx or IIS, incident response that covers outside hours, and the escalation path the support team follows.
- Directed the architecture the business scaled on: stores grouped behind dedicated API instances, a database per store, one shared central database for chain wide data such as vouchers and customers, and a distribution gateway that routes every request to the right store. The chain grew from 10 to 20+ stores on that design.
- Led the design of checkout that keeps selling offline: each store runs a local SQLite database seeded with the master data it needs, sales continue when the connection drops, and a background scheduler pushes transactions and reconciles on reconnect. All stores now run hybrid.
- Led the SAP integration end to end: a one way outbound feed that writes sales revenue, custom billing, inventory and invoices as plain text files, delivered over SFTP and mapped to the layout SAP expects, so nothing is keyed in by hand.
- Connected the rest of the business estate the same way: other ERP and business systems connect over SFTP files or APIs, with sync run as soon as a record is ready, inside scheduled windows, or from cron jobs, whichever the receiving system can take.
- Delivered the features the business sells with, including mix and match promotions and POSM, plus a second POS that runs online only for an internal ERP, and stabilized an inherited codebase on taking over.

Tech: C# (.NET Core), TypeScript and JavaScript, Vue 3 with Nuxt, SQL Server, PostgreSQL, SQLite, Redis; Linux (nginx) and Windows (IIS) hosting; SAP and other ERP integration.

Full Stack Developer | Biztools Enterprise Solutions

Feb 2022 – Jun 2025 | Phnom Penh, Cambodia

- Built, maintained and enhanced ERP and POS systems for a roster of clients, each with its own requirements, adding a container shipment tracking system, a customer loyalty program, and Flutter and native Android apps for stock counts and loyalty.
- Worked every layer from database to interface across two generations of the stack: .NET Framework 4.x and .NET Core, with React, Svelte or Next.js on the frontend.

Tech: C# (.NET Framework 4.x, .NET Core), JavaScript, TypeScript, React, Svelte, Next.js, Flutter, native Android; SQL Server; encrypted file storage.

Full Stack Developer and Team Lead | One Click Solution

Nov 2019 – Jan 2022 | Phnom Penh, Cambodia

- Built a logistics system and an ecommerce system from the ground up, covering ordering, fulfilment and delivery, and wrote internal libraries that later projects reused.
- Led a small team: planned iterations, delegated work and mentored junior developers.

Tech: C# (.NET Framework 4.x), JavaScript, SQL Server, SignalR.

KEY STRENGTHS

- Own the outcome end to end: plan, design, build, release and support the platform, and stay accountable when live store operations depend on it.
- Teach through review: raised developer quality at Chipmong and mentored juniors at One Click Solution with regular code review rather than lectures.
- Translate between the floor and the code: sit between store and business teams and the developers, turning operational needs into features people use.
- Plan and prioritize under real pressure: a POS that runs 24 hours a day across 20+ stores means constant triage between urgent operational fixes and scheduled feature work.

EDUCATION & CERTIFICATIONS

- Google Project Management Certificate, Coursera, in progress (covers the full project management lifecycle)
- Google Agile Project Management Certificate, Coursera, 2026 (Agile and Scrum)
- Bachelor of Computer Science, National Polytechnic Institute of Cambodia (2019 – 2022)
- High School Diploma, Bak Touk High School (2014 – 2018)

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, SQL

Backend: .NET Framework 4.x, .NET Core and .NET, REST APIs, Entity Framework Core, SignalR

Frontend: Vue 3 with Nuxt, React, Next.js, Svelte, HTML/CSS

Data and tooling: SQL Server, PostgreSQL, SQLite, Redis, encrypted data storage, Git

Practices: Agile and Scrum, code review, clean and modular architecture, JWT authentication, TDD, system and database design, deployment and release pipelines (CI/CD), SAP integration, AI assisted development

Leadership: team supervision, mentoring, task management, prioritization, problem solving, requirements analysis with stakeholders, delivery planning

LANGUAGES

Khmer (native), English (excellent, professional working proficiency)
